

## **Bell-Press LED Dimmer Setting: LED's turning off prematurely or not turning on at low intensity**

### **Application:**

1. LED's that turn off completely when dimming to lowest dimmer intensity
2. LED's that do not turn on at lowest dimming intensity once turned off

### **Instructions:**

1. Dim down and keep the bell-press switch pressed
2. The LED's will turn off, keep the switch pressed.
3. The LED's will turn on again after a while (at low intensity).
4. Release the bell-press switch the instance that the LED's turn on
5. Now set the dimmer's minimum intensity as follows:
  1. Press the bell-press switch 11 times
  2. If the dimmer accepts the program setting, the lamps will go to full intensity
6. The dimmer is now set to the turn on intensity of the LED and the setting is retained even after a prolonged power failure
